SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	12/20/2006	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

09/943,562

Applicant(s)

DOYLE ET AL.

Examiner

KAMAL B. DIVECHA

Art Unit

2151

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 October 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 45-79 and 82-98 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 45-79, 82-98 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Response to Arguments

Claims 1-44, 80, 81 and 99-102 are cancelled in this application.

Claims 45-79, 82-98 are pending in this application.

Applicant's arguments filed on December 12, 2006 in a request for continued examination (RCE) with respect to claims 45-79, 82-98 have been considered but are moot in view of the new ground(s) of rejection as presented below as a non-final office action.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 74-79, 86, and 96-98 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 74 recites "A method of creating a link to an object, the method comprising...creating a redirect link on a web server receiving the request and deploying the redirect link on at least one other web server...".

The phrase "other" in the claim renders the claim indefinite because it is unclear which one of the servers is actually considered "other", rendering the scope of claim unascertainable.

Furthermore, the claim fails to teach, disclose or suggest more than one web server. So, it is unclear which "other" web server the applicant is referring to.

Claims 75-79, 86, and 96-98 are rejected for the same reasons as set forth in claim 74.

Art Unit: 2151

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 45-49, 51-79, 82-98 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hu (hereinafter Hu, U.S. Patent No. 6,173,322 B1) in view of Hu et al. (U. S. Patent No. 6,535,518 B1).

As per claim 45, Hu discloses a method of serving objects in a computing network, the method comprising:

receiving a request from a sender for an object stored on an intelligent storage system, the request being received by a web server (fig. 4 block #404 and fig. 2 block #202);

evaluating the request for the object based upon at least one predetermined criterion (fig. 4 item #406 and col. 7 L53-63);

Art Unit: 2151

if the at least one predetermined criterion is met, returning a redirect code from the web server to the sender, wherein the sender utilizes the redirect code to obtain the object directly from a content server through a direct connection that bypasses the web server that received the request (col. 11 L4 to col. 12 L52: i.e. when the redirection criteria is satisfied, the system utilizes redirect module);

if the at least one predetermined criterion is not met, serving the stored object from the intelligent storage system to the sender via the web server (col. 11 L4 to col. 12 L52: i.e. when the redirection criteria is not satisfied, the system operates under proxy module, which obtains the response from the storage device and forwards the response to the client or sender).

However, Hu does not disclose intelligent storage system comprising a control unit configured to determine a mapping for the requested object to a location on an associated storage device (i.e. a network-attached storage system) and the process wherein the sender utilizes the redirect code to obtain the object in a manner that bypasses the web server for outbound traffic from the intelligent storage system to the client without transferring a corresponding session between the web server and the sender to a different web server.

Hu et al., from the same field of endeavor, explicitly discloses an intelligent storage system comprising a control unit configured to determine a mapping for the requested object to a location on an associated storage device (i.e. a network-attached storage system, col. 2 L35-67, fig. 8 item 110, fig. 9 item #250) and the process wherein the sender utilizes the redirect code to obtain the object in a manner that bypasses the web server for outbound traffic from the intelligent storage system to the client without transferring a corresponding session between the

Art Unit: 2151

web server and the sender to a different web server (col. 2 L35-67, col. 5 L1-62, col. 6 L19-67, col. 7 L15-36, col. 8 L30 to col. 9 L24, col. 19 L63 to col. 20 L49, fig. 11, fig. 12).

Therefore it would have been obvious to a person of ordinary skilled in the art at the time the invention was made to modify Hu in view of Hu et al., in order to include a an intelligent storage system such as network-attached storage and the process wherein the sender utilizes the redirect code to obtain the object in a manner that bypasses the web server for outbound traffic from the intelligent storage system without transferring the current session to another web server.

One of ordinary skilled in the art would have been motivated because it would have improved the overall system performance, throughput and quality of service (QoS) (Hu et al., col. 3 L25 to col. 4 L15, col. 5 L1-11, col. 6 L59-67).

As per claim 46, Hu discloses the process wherein returning a redirect code from the web server to the sender comprises informing a sender of the received request that a subsequent connection to the control unit should be established for serving the stored object (col. 6 L14-22; col. 13 L45-47; col. 12 L43-48; col. 18 L47-51).

As per claim 47, Hu discloses the process wherein the redirect code points the sender to the logical location of the object (i.e. URL or the address of the object) on the intelligent storage system and bypasses the web server (col. 12 L35-52).

As per claim 48, Hu discloses the process wherein the redirect code comprises redirect indication of an existing protocol (col. 11 L17-34 and col. 3 L8-10: http uses 302 as a redirect code).

As per claim 49, Hu discloses the process wherein the existing protocol is Hypertext Transfer Protocol (col. 5 L29-34; col. 6 L60-61).

As per claim 51, Hu discloses the process further comprising automatically requesting establishment of the subsequent connection between the sender and the storage system in response to the redirect code (col. 12 L35-40).

As per claim 52, Hu in view of Hu et al. discloses the process wherein evaluating the request for the object based upon the at least one predetermined criterion comprises evaluating the request for the object based upon a size of the stored object (Hu, col. 12 L10-42; Hu et al., col. 6 L19-67). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 53, Hu discloses the process wherein evaluating the request for the object based upon the predetermined criterion comprises comparing a size of the stored object to a statically-specified number (col. 10 L1-9; col. 8 L26-38 and fig. 6 step#602).

As per claim 54, Hu discloses the process wherein the statically-specified number is specified by an administrator using a configuration interface (col. 7 L60-62).

As per claim 55, Hu discloses the process wherein evaluating the request for the object based upon at least one predetermined criterion comprises comparing a size of the stored object to a dynamically-determined number (fig. 6 block #204 and step #602, 604; col. 7 L53-61; col. 5 L55-67 and col. 10 L1-5).

As per claim 56, Hu discloses the process wherein the dynamically-determined number is determined in view of current network conditions (col. 9 L7-65).

As per claim 57, Hu in view of Hu et al., discloses evaluating the request for the object based upon at least one predetermined criterion comprises evaluating a naming extension (such as jpeg or mpeg file) of the stored object (Hu, fig. 7 block #702 and fig. 6 step #602 and col. 8

Art Unit: 2151

L26-38; Hu et al., col. 1 L5-32, col. 5 L25 to col. 6 L59, col. 7 L15-16). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 58, Hu in view of Hu et al., discloses evaluating the naming extension of the stored object comprises determining whether a naming extension matches an element in a statistically-specified set of naming extensions (Hu, fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38; Hu et al., col. 1 L5-32, col. 5 L25 to col. 6 L59, col. 7 L15-16). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 59, Hu in view of Hu et al., discloses the process wherein the statically-specified set of naming extensions is specified by an administrator using a configuration interface (Hu, col. 7 L60-62; Hu et al., col. 1 L5-32). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 60, Hu in view of Hu et al., discloses the process wherein evaluating the request for the object based upon predetermined criterion comprises determining whether a naming extension matches an element in a set of dynamically-determined set of naming extensions (Hu, fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38; Hu et al., col. 1 L5-32). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 61, Hu in view of Hu et al., discloses the process wherein the dynamically-determined set of naming extensions is determined in view of current network conditions (Hu, col. 9 L7-65; Hu et al., col. 1 L5-32). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

Art Unit: 2151

As per claim 62, Hu in view of Hu et al., discloses the process wherein evaluating the request for the object based upon at least one predetermined criterion comprises evaluating the request for a name of the stored object (Hu et al., col. 5 L25 to col. 6 L59, col. 7 L15-26). One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

As per claim 63, Hu discloses the process wherein evaluating the request based on criteria comprises determining whether an object name matches an element in a statically-specified set of object names (fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38).

As per claim 64, Hu discloses the process wherein the statically-specified set of object names is specified by an administrator using a configuration interface (col. 7 L60-64).

As per claim 65, Hu discloses the process wherein evaluating the request based on criteria comprises determining whether an object name matches an element in a set of dynamically-determined set of object names (fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38).

As per claim 66, Hu discloses the process wherein the dynamically-determined set of object names is determined in view of current network conditions (col. 9 L7-65).

As per claim 67, Hu discloses the process wherein the predetermined criteria comprises a content type of the stored object (col. 13 L5-10).

As per claim 68, Hu discloses the process wherein evaluating the request based on criteria comprises determining whether a content type matches an element in a statically-specified set of content types (fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38).

Art Unit: 2151

As per claim 69, Hu discloses the process wherein the statically-specified set of content types is specified by an administrator using a configuration interface (col. 7 L53-62; col. 8 L42-59).

As per claim 70, Hu discloses the process wherein evaluating the request based on criteria comprises determining whether a content type matches an element in a set of dynamically-determined set of content types (fig. 7 block #702 and fig. 6 step #602 and col. 8 L26-38).

As per claim 71, Hu discloses the process wherein the dynamically-determined set of content types is determined in view of current network conditions (col. 9 L7-65).

As per claim 72, Hu discloses the process wherein evaluating the request for the object upon at least one predetermined criterion comprises using one or more wildcards which may operate to match more than one stored object (col. 6 L53-61).

As per claim 73, Hu does not disclose the process wherein the intelligent storage system comprises a network-attached storage.

Hu et al., from the same field of endeavor explicitly discloses the intelligent storage system, i.e. a network-attached storage (col. 2 L35-67, fig. 8 item 110, fig. 9 item #250).

Therefore it would have been obvious to a person of ordinary skilled in the art at the time the invention was made to modify Hu in view of Hu et al., in order to employ network-attached storage system.

One of ordinary skilled in the art would have been motivated because of the same reasons as set forth in claim 45.

Art Unit: 2151

As per claim 74, Hu discloses a method of creating a link to an object, the method comprising:

receiving a request for a particular object that is stored in an intelligent storage system (col. 5 L29-34; col. 18 L29);

evaluating at least one characteristic of the particular object (col. 6 L62-67 and col. 8 L8-10; col. 18 L30-31);

creating a redirect link on a web server receiving the request and deploying the redirect link on at least one other web server if the at least one evaluated characteristics of the particular object is satisfied (col. 5 L41-47 and col. 12 L43-52), the redirect link being configured to redirect the request to the storage system (fig. 2 item #212, col. 12 L35-36); and

creating an object serving link on the web server receiving the request and deploying the object serving link on at least one other web server if the evaluated characteristics of the particular object is not satisfied (col. 5 L20-54 and fig. 13: more than one request manager implies that there is more than one redirect file employed, col. 6 L43-61 and col. 11 L45-59).

However, Hu does disclose an intelligent storage system comprising a control unit configured to determine mapping for the requested object to a location on an associated storage device.

Hu et al., from the same field of endeavor, explicitly discloses an intelligent storage system comprising a control unit configured to determine a mapping for the requested object to a location on an associated storage device (i.e. a network-attached storage system, col. 2 L35-67, fig. 8 item 110, fig. 9 item #250) and the process wherein the sender utilizes the redirect code to obtain the object in a manner that bypasses the web server for outbound traffic from the

Art Unit: 2151

intelligent storage system to the client without transferring a corresponding session between the web server and the sender to a different web server (col. 2 L35-67, col. 5 L1-62, col. 6 L19-67, col. 7 L15-36, col. 8 L30 to col. 9 L24, col. 19 L63 to col. 20 L49, fig. 11, fig. 12).

Therefore it would have been obvious to a person of ordinary skilled in the art at the time the invention was made to modify Hu in view of Hu et al., in order to include a an intelligent storage system such as network-attached storage.

One of ordinary skilled in the art would have been motivated because it would have improved the overall system performance, throughput and quality of service (QoS) (Hu et al., col. 3 L25 to col. 4 L15, col. 5 L1-11, col. 6 L59-67).

As per claim 75, Hu discloses the process wherein the redirect link enables returning a redirect status code to a requester of the object (col. 12 L43-52).

As per claim 76, Hu discloses the process of requesting establishment of a subsequent connection automatically in response to receiving the redirect status code for retrieving the particular object directly from the intelligent storage system (col. 12 L35-40 and col. 18 L47-51).

As per claim 77, Hu discloses the process wherein contents of the redirect link are programmatically created (col. 5 L20-22 and L40-47).

As per claim 78, Hu in view of Hu et al. does not explicitly disclose the process wherein the contents of the redirect link are manually created, However, the process of manually creating the redirect link is known in the art Therefore it would have been obvious to a person of ordinary skilled in the art at the time the invention was made to modify Hu in view of Hu et al. in order to create the contents of the redirect link manually. One of ordinary skilled in the art would have

Art Unit: 2151

motivated because it would have enabled a web site developer or an administrator to redirect traffic to an appropriate destination.

As per claims 79, 82-98, they do not teach or further define over the limitations in claims 45-49, 51-78. Therefore, claims 79, 82-98 are rejected for the same reasons as set forth in claims 45-49, 51-78.

3. Claim 50 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hu (hereinafter Hu, U.S. Patent No. 6,173,322 B1) in view of Hu et al. (U. S. Patent No. 6,535,518 B1), and further in view of Dillon et al (hereinafter Dillon, U.S. Patent No. 6,658,463 B1).

As per claim 50, Hu in view of Hu et al. does not explicitly disclose the process of using the wireless session protocol.

Dillon explicitly discloses a satellite communications network including an upstream proxy server and two reporting downstream proxy servers wherein communication takes place through a wireless satellite link using wireless session protocol (fig. 7 and col. 12 L52-58).

Therefore, it would have been obvious to a person of ordinary skilled in the art at the time the invention was made to incorporate the teaching of Dillon with Hu in view of Hu et al. in order to order to enable communications wirelessly by using wireless session protocol.

One of ordinary skilled in the art would have been motivated because it would have improved the transmission efficiency by providing high-speed and continuous channel carrying packetized data (Dillon et al, col. 1 L15-21; col. 3 L38-57).
